## 1. Description

STK-HD/S current sensor is based on the open loop principle and TMR technology. DC, AC, pulses and any kind of irregularities wave can be measured by the current sensor under the isolated conditions.

### Typical application

- AC Variable speed drives
- Servo driver
- Switched model power supplies (SMPS)
- Direct-current dynamo
- MPPT

### General parameters

| Parameter           | Symbol           | Unit | Value     |
|---------------------|------------------|------|-----------|
| Working temperature | T <sub>A</sub>   | °C   | -40 ~ 105 |
| Storage temperature | T <sub>stg</sub> | °C   | -40 ~ 105 |
| Mass                | m                | g    | 3.3       |

### Absolute parameters

| Parameters       | Symbol           | Unit | Value |
|------------------|------------------|------|-------|
| Supply voltage   | V <sub>C</sub>   | V    | 6     |
| ESD rating (HBM) | U <sub>ESD</sub> | kV   | 4     |

Remark: the unrecoverable damage may occur when the product works on the conditions over the absolute maximum ratings. Long-time working on the absolute maximum ratings may cause the degradation on performance and reliability.

### Isolation parameters

| Parameter                                | Symbol         | Unit | Value                    | Remark |
|------------------------------------------|----------------|------|--------------------------|--------|
| RMS voltage for AC test<br>50Hz/1 min    | U <sub>d</sub> | kV   | 4                        |        |
| Impulse withstand<br>voltage<br>1.2/50μs | Ū <sub>w</sub> | kV   | 6                        |        |
| Case material                            |                |      | V0 according to<br>UL 94 |        |
| Comparative tracking<br>index            | CTI            | V    | 600                      |        |

## 2. Electrical performance of STK-03HD/ S

| Parameter                                                                                           | Symbol              | Unit                 | Min  | Typ    | Max  | Comment                  |
|-----------------------------------------------------------------------------------------------------|---------------------|----------------------|------|--------|------|--------------------------|
| Primary nominal current rms                                                                         | I <sub>pn</sub>     | A                    |      | 3      |      |                          |
| Primary current measuring range                                                                     | I <sub>pm</sub>     | A                    | -7.5 |        | 7.5  |                          |
| Supply voltage                                                                                      | V <sub>cc</sub>     | V                    | 4.75 | 5      | 5.25 |                          |
| Current consumption                                                                                 | I <sub>cc</sub>     | mA                   |      | 5      | 10   |                          |
| Reference voltage                                                                                   | V <sub>ref</sub>    | V                    | 2.47 | 2.5    | 2.53 | Output function          |
| Quiescent voltage<br>V <sub>out</sub> @ 0 A                                                         | V <sub>off</sub>    | V                    | 2.47 | 2.5    | 2.53 |                          |

| Internal output resistance                                                                          | R <sub>out</sub>    | Ω                    |      | 1      |      |                          |
| Internal reference resistance                                                                       | R <sub>ref</sub>    | Ω                    |      | 1      |      |                          |
| Theoretical gain                                                                                    | G                   | mV/A                 |      | 267    |      |                          |
| Rated linearity error                                                                               | Non-L               | %I <sub>pn</sub>     |      | 0.5    |      | Within ±I <sub>pn</sub>  |
| Step response time                                                                                  | t <sub>res</sub>    | μs                   |      | 0.4    |      | @ 90% of I <sub>pn</sub> |
| Frequency bandwidth (-3dB)                                                                          | BW                  | kHz                  |      | 800    |      | No RC circuit            |
| Output voltage noise<br>DC ~ 10 kHz<br>DC ~ 100 kHz                                                 | V <sub>noise</sub>  | mVpp                 |      | 1<br>4 |      | @250kHz<br>Sampling Rate |
| Accuracy @ 25°C                                                                                     | X                   | % of I <sub>pn</sub> | -0.8 |        | 0.8  | @ 25°C                   |
| Accuracy @ -40°C~105°C                                                                              | X <sub>TRange</sub> | % of I <sub>pn</sub> | -1.5 |        | 1.5  | -40°C ~ 105°C            |

### Remarks:

- the accuracy @ -40°C~105°C, X<sub>TRange</sub> = (((V<sub>out</sub> – V<sub>ref</sub>)@ I<sub>n</sub> @ T<sub>x</sub>) – V<sub>oe</sub>@ 25°C – G<sub>th</sub> \* I<sub>n</sub>) / V<sub>FS</sub>, where T<sub>x</sub> represents present temperature, G<sub>th</sub> is fitted gain at room temperature.

### 3. Electrical performance of STK-05HD/ S

| Parameter                                                                                           | Symbol              | Unit                 | Min   | Typ    | Max  | Comment                  |
|-----------------------------------------------------------------------------------------------------|---------------------|----------------------|-------|--------|------|--------------------------|
| Primary nominal current rms                                                                         | I <sub>pn</sub>     | A                    |       | 5      |      |                          |

| Accuracy @ -40°C~105°C                                                                              | X <sub>TRange</sub> | % of I <sub>pn</sub> | -1.5 |        | 1.5  | -40°C ~ 105°C            |

##### Remarks:

- the accuracy @ -40°C~105°C, X<sub>TRange</sub> = (((V<sub>out</sub> – V<sub>ref</sub>)@ I<sub>n</sub> @ T<sub>x</sub>) – V<sub>oe</sub>@ 25°C – G<sub>th</sub> \* I<sub>n</sub>) / V<sub>FS</sub>, where T<sub>x</sub> represents present temperature, G<sub>th</sub> is fitted gain at room temperature.

## 5. Output voltage VS primary current of STK-HD/ S

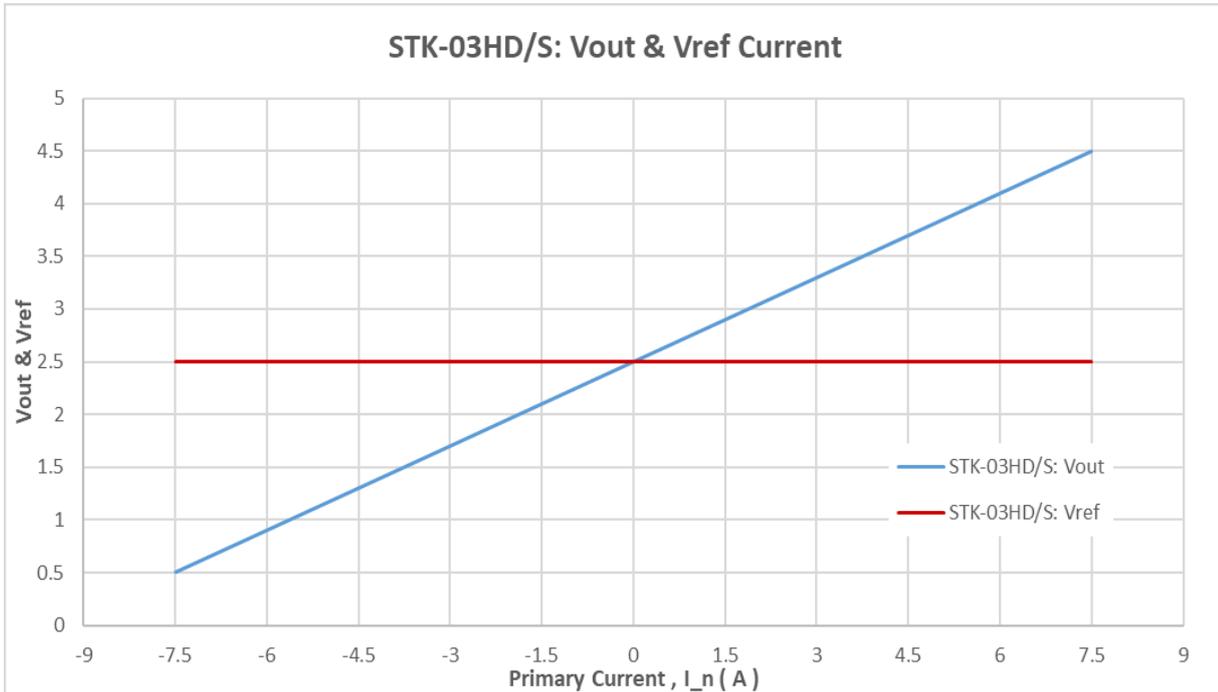

Fig.1 The dependence of Vout&Vref of STK-03HD/S on the primary current.

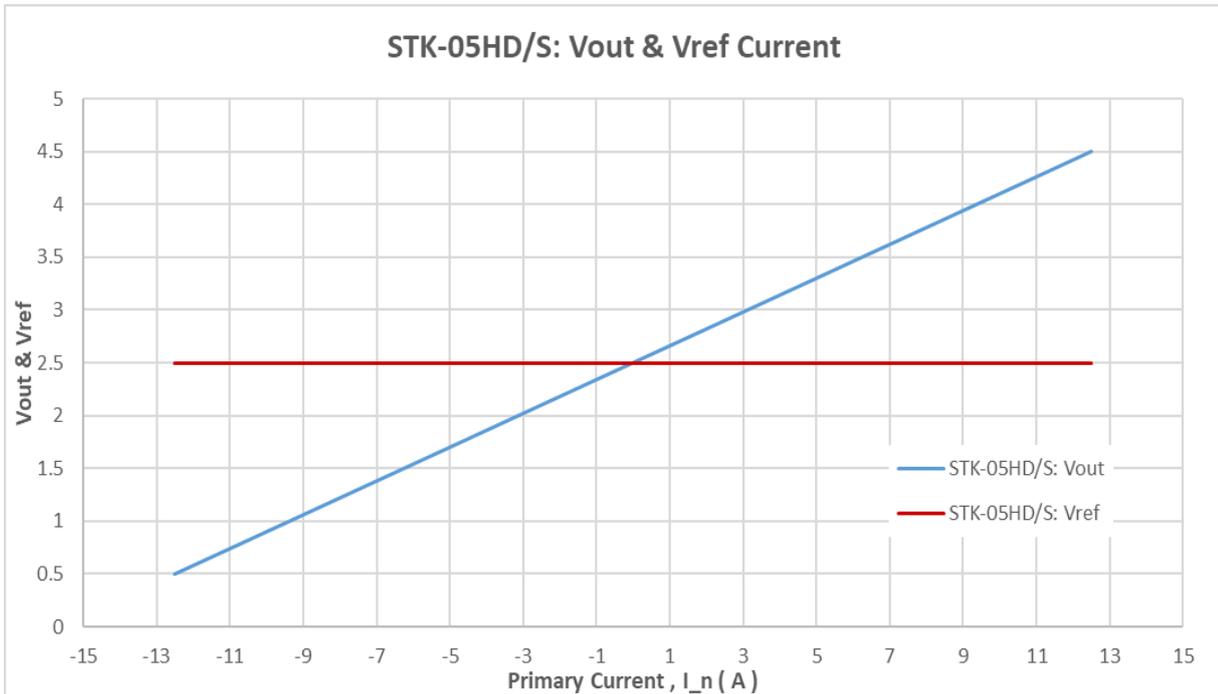

Fig.2 The dependence of Vout&Vref of STK-05HD/S on the primary current.

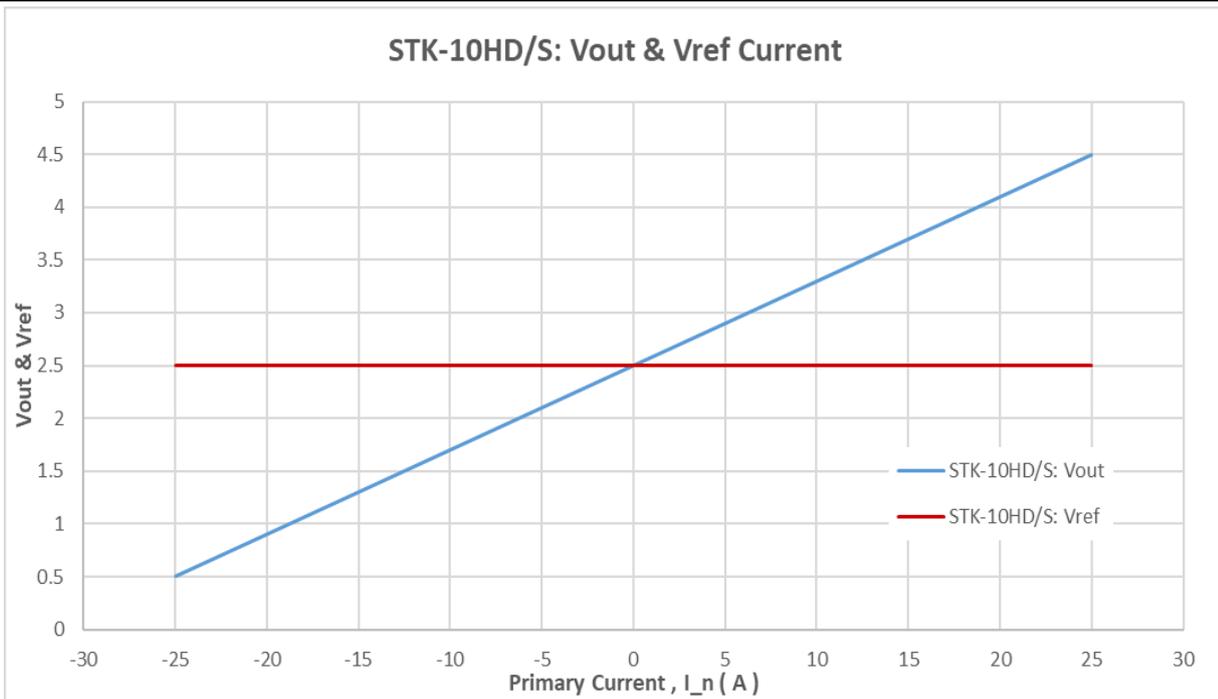

Fig.3 The dependence of  $V_{out}$  &  $V_{ref}$  of STK-10HD/S on the primary current.

## 6. Frequency band width

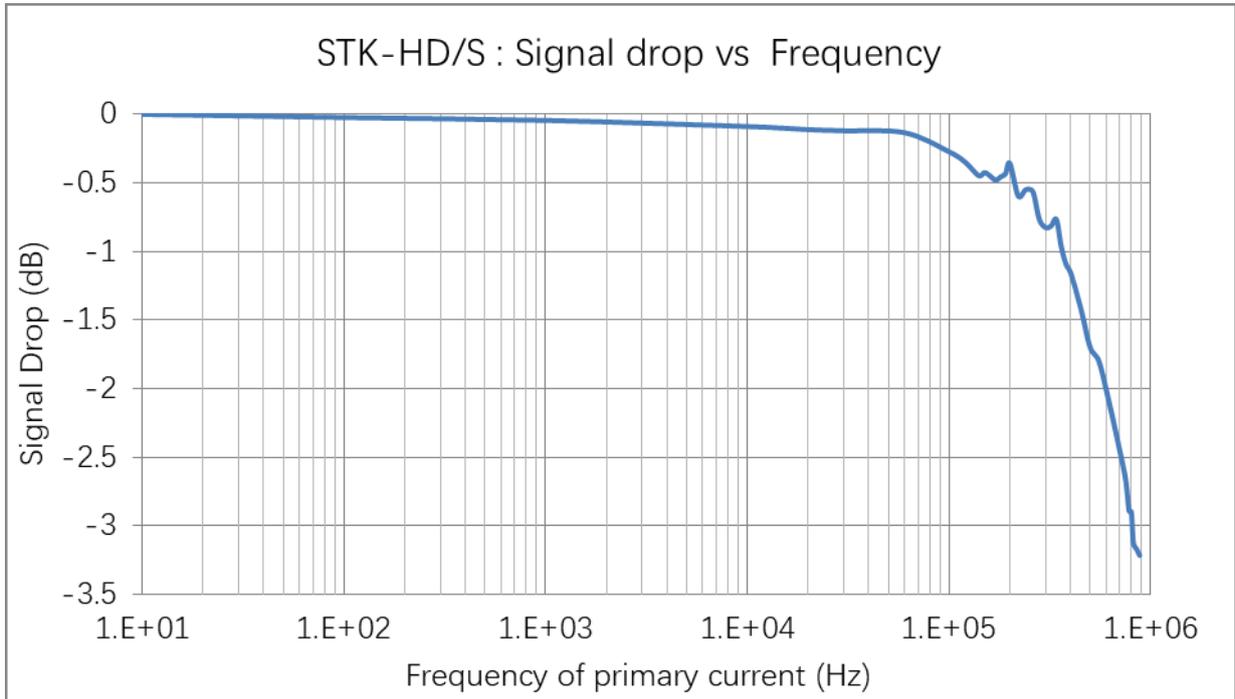

Fig.4 the frequency band width of STK-HD/S series current sensors.

## 7. Step response time

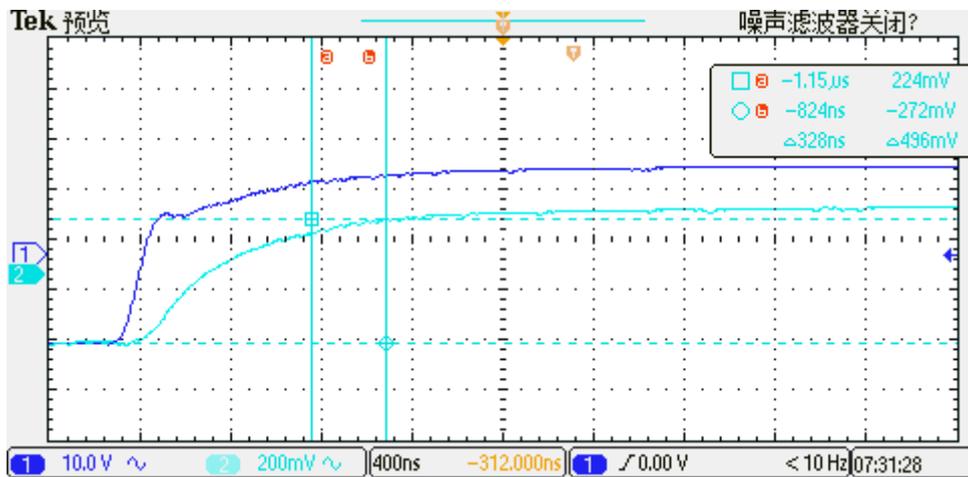

Fig.5 the step response time of STK-HD/S current sensors. The light blue is primary current, while the dark blue is output signal of current sensor. The step response time is less than 0.4 μs.

## 8. Frequency delay performance

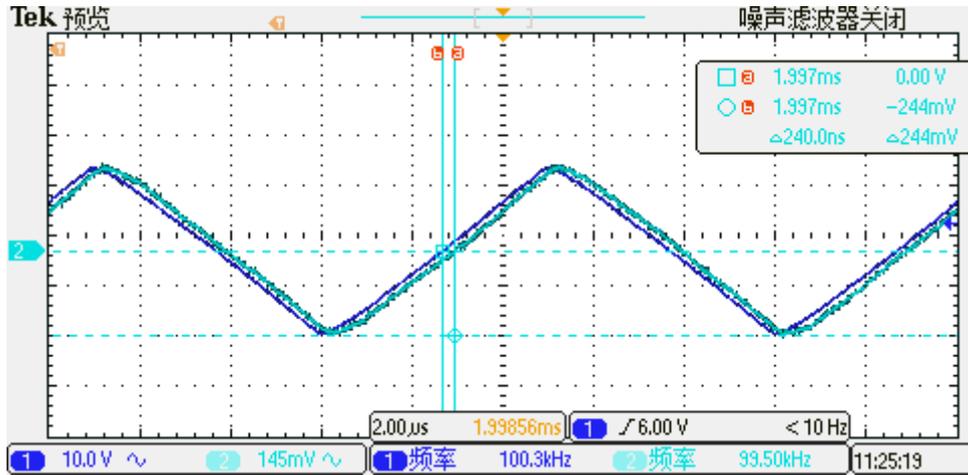

Fig.6 when detection the primary current with a frequency of 100 kHz. The typical results of the output of STK-HD/S current sensor on the primary current delay characteristics. The response time is 0.24 μs.

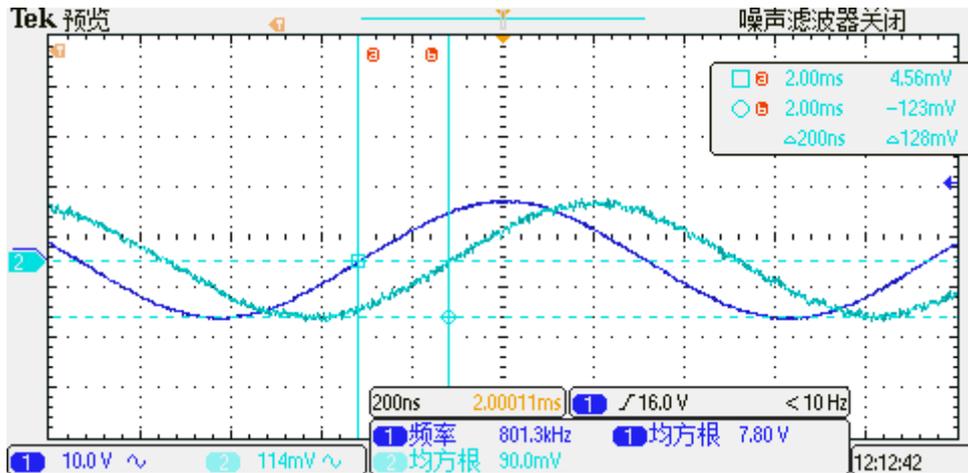

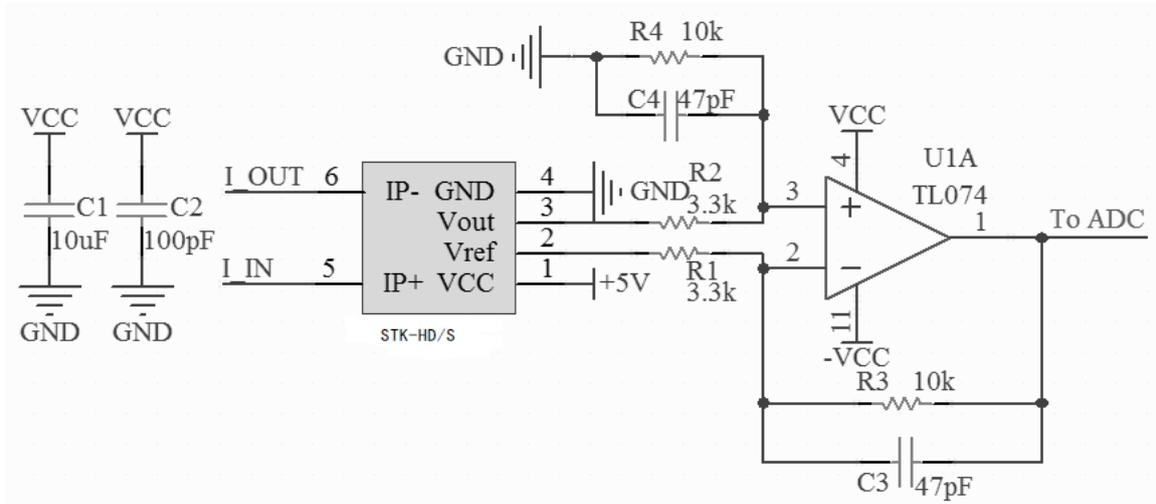

Fig.7 when detection the primary current with a frequency of 800 kHz. The typical results of the output of STK-HD/S current sensor on the primary current delay characteristics. The Sine wave response time is 0.2 μs.

## 9. Typical application circuits for STK-HD/S

Typical application circuits for STK-HD/S current sensor. The magnification can be estimated as  $M = R4/R2$  with the condition of  $R1 = R2$ , and  $R3 = R4$ . The magnification in the above circuit is about 3. The frequency characteristics of STK\_HD/S series current sensor are not affected by the R-C setting, therefore the active filter circuit or R-C circuit can be applied to modulate the sensor's frequency characteristics.

## 10. Dimensions & Pins & Footprint
